

GET 1500+ VISITORS A DAY EASY METHOD

OK, so here goes... No fluff no filler just a straight method for getting 1500+ visitors every single day. We all know that without traffic a website is sunk so this method will show you how to get a shed load of traffic completely on auto-pilot.

The first thing you will need to do is to sign up for a Netlog account.
<http://www.netlog.com>.

Spend some time making a great looking profile, think about what is going to appeal to people and definately make it look human.

What you don't want to do unless you are happy using proxies and clearing cookies before every visit, is to create more than one profile. This is a very easy way to get banned from Netlog.

Ok, so you have your profile replete with fluffy bunnies and pictures of your yorkie pup, etc, etc...

Next thing is to write a blog post, everyone who visits you page will check out your blog and your links. Add the link to your homepage in your blog. Make it a fully formed link with the http part like
<http://www.theaffiliatepalace.com>

When it comes time to save the blog make sure you agree to share the link as a favourite link. This will place it at the top of your profile.

You can spend some time over your netlog profile, setting skins and so forth, remember the traffic generation part is completely automatic so you won't have to spend time on that.

So, we now have a profile which will attract people, add a nice looking skin and some nice pictures to your profile. There is no need to make your profile a sexy girl but that depends on how you are going to try

and monetize this method. If you are going to be directing randy guys to your livecam affiliate link then obviously you will need to set yourself up as a sexy girl.

I know, I know, I'm getting to the good stuff. One of the great things about Netlog, when compared with Facebook and MySpace, is that every time someone visits your Netlog page, you see their picture on the right side of the screen. This means that if you are "online" (remember that word, we'll get back to it) you can see if someone visits your page. The usual thing is to go and look back at their profile to find out who was looking at yours.

Now what if we could automate the process of visiting anyone who is online. Thousands of profiles, how many visitors do you think would come back and look at your profile? And how many would check out your blog and your link(s).

OK, so we have this script and it looks exactly like this...

```

require LWP::UserAgent;
my $ua = LWP::UserAgent->new;
$ua->timeout(10);
$ua->env_proxy;
$ua->agent ("Mozilla/5.0 (Windows; U; Windows NT 5.0; en-US; rv:1.7.10) Gecko/20050716
Thunderbird/1.0.6");
$url =
"http://en.netlog.com/go/explore/profiles/view=online&country=-1&region=&gender=FEMALE&minimumAge=18&maximumAge=80&ageType=ALL&page=";
@numr = (1...20);
chomp($session = $ARGV[0]);
$session =~ s/ //ig;
print "\n\n\n=====\n\n\n";
print "Session id: '$session'";
print "\n\n\n=====\n\n\n";
$header = ('Cookie' => 'PHPSESSID='.$session.");
$j = 0;
while($j < 50)
{
    $j++;
    @urls = ();
    foreach $nr(@numr)
    {
        $lolurl = $url.$nr;
        $rs = $ua->get($lolurl,$header);
        if($rs->is_success)
        {
            $c = $rs->content;
            while ($c =~ /<a href="(.)" title="(.)" class="imageWrap person"
target="_blank">/ig)
            {
                push(@urls,"http://en.netlog.com$1");
                print writee "$1\n";
            }
            $csize = @urls;
            print "Page $nr done - size of urls $csize \n";
        }
    }
    $i=0;
    foreach $ulr(@urls)
    {
        $size = @urls;
        $rs = $ua->get($ulr,$header);
        if($rs->is_success)
        {
            $i++;
            print "Visited $ulr! nr $i of $size\n";
        }
    }
    print "\n\n\n=====\n\n\n";
    print "Part $j completed! Size of urls: $size\n";
    print "Completed url's: $i \n";
    print "\n\n\n=====\n\n\n";
    sleep(60);
}

```

I suggest that you copy that code into a text file and save it as "netlog.pl" directly to your C: drive. NOT in any folders unless you know what you are doing. From **Notepad** click on **File** --> **Save As** --> Select your C: Drive --> change **Save As Type** to **All Files** then type in the filename as **netlog.pl**

The only line you might want to change is...

\$url =

```
"http://en.netlog.com/go/explore/profiles/view=online&country=-1&region=&gender=FEMALE&minimumAge=18&maximumAge=80&ageType=AL"
```

notice the word **FEMALE**, you can change this to **MALE** depending on the traffic you want.

So, how do we go about running this script...

The first thing you will want to do is to download and use the [Firefox](#) browser. Firefox because we need to get access to the cookies saved on our computer.

The next thing you will want to do is to download and run [Active Perl](#) this will allow you to run Perl scripts from your own computer.

Once this is done you are almost complete...

Load up Firefox and login to your netlog account. Now select **Tools** --> **Options** --> **Privacy** --> **Show Cookies**

Scroll through the cookies looking for the Netlog cookie, on my computer it appears as en.netlog.com

Click on the little cross to the left of this to open the folder and view

the cookies inside. What we are looking for is the SessionID. Again, on my computer it appears as **PHPSESSID**. In the **Content** you will see a long number like 369a0b48303b5c615090a01445061d01 this is your Session ID. Copy this string of numbers and then click on the **Start Menu** on your computer. Go to **Run** and type in **CMD**.

You will get a DOS command window. From there type in **C:\netlog.pl** followed by one space. Right click on the blue bar at the top of this window and select **Edit** --> **Paste** and paste in your Session ID.

The line should look like this `C:\netlog.pl 369a0b48303b5c615090a01445061d01`

Except YOUR Session ID will be a different number. Now just press Enter or Return and the script will start running. If you watch it for a little bit you will see that it is automatically trawling all of the Netlog users that are online and visiting their profiles. They will see this visit on their profile and come back to look at yours.

C:\WINDOWS\system32\cmd.exe - netlog.pl 459a0b48303a5e614080a01445061d00
